What’s the best way to present your knowledge, skills and experience?

**BAR CHART**
A bar chart or bar graph is a chart with rectangular bars with lengths proportional to the values they represent. The bars can be plotted vertically or horizontally.

**FLOW CHART**
A flowchart is a type of diagram that represents an algorithm or process, showing the steps as boxes of various kinds, and their order by connecting these with arrows. This diagrammatic representation can give a step-by-step solution to a given problem.

**AREA CHART**
An area chart is based on the line or fever chart. The area between axis and line is commonly emphasized with colors, textures and hatchings.

**ORG CHART**
An organizational chart is a diagram that shows the structure of an organization and the relationships and relative ranks of its parts and positions or jobs.

**LOCATOR MAP**
A locator map is typically a simple map used to show the location of a particular geographic area within its larger and presumably more familiar context.

**BUBBLE CHART**
A bubble chart can be used instead of a fever chart if your data has three data series, each of which contains a set of values. For example, to show the dates opened, the number of employees and city of offices all in one chart.

**TREE DIAGRAM**
This diagram starts at a single node, with branches emanating to additional nodes, which represent mutually exclusive decisions or events. A decision or event will then lead from node to node until a conclusion is reached.

**SPIDER GRAPHIC**
The spider graphic compares multi-criteria data, using a circular chart of up to 30 variables representing important features of each item being compared. Axes connect the features drawn as spokes of a wheel, and the plotted length of the line is proportional to the rating of that feature.

**NON CIRCULAR PIE**
This chart illustrates proportion much more effectively than the circular pie. The charts are perhaps the most widely used statistical charts in the business world and the mass media.

**QUOTE BOX**
A quote box or call out box that is a simple attention-getting quote from the main text. It may summarize the entire text or be a meaningful tidbit, fact or thoughtful idea.
